#### Caution

We strongly recommend that all neptronic® products be wired to a separate transformer and that transformer shall service only neptronic® products. This precaution will prevent interference with, and/or possible damage to incompatible equipment. When multiple actuators are wired on a single transformer, polarity must be observed. Long wiring runs create voltage drop which may affect the actuator performance.

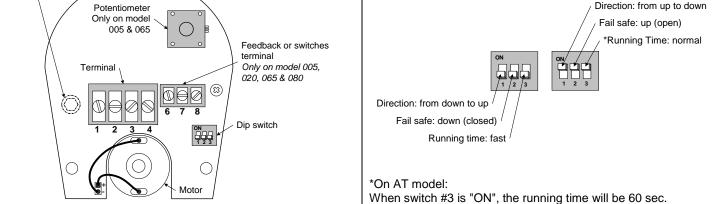

<sup>1</sup> Enerdrive Fail-Safe System: US Patent #5,278,454 | European Patent #0647366

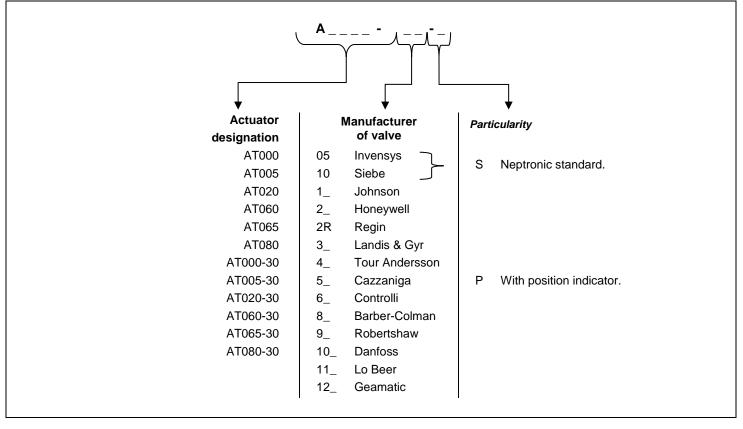

## Mechanical installation

Mechanical installation					
Mounting of the actuator of	on valve				
Correct mounting	Non Correct mounting	1. Screw completely the valve shaft (C) unto the coupling of the actuator (A).			
		<ol> <li>Unscrew the coupling (A) for ½ of turn in order to leave a functional play.</li> </ol>			
A GAP		3. Screw the counter nut (B).			
B [		Warning:			
		Do not over tight coupling of the actuator on the shaft of the valve.			
Mounting of the actuated	valve on system				
Vertical mounting	Horizontal mounting	<ol> <li>Pay attention to system particularity; be sure that the expansions, contractions of the system and its medium as well as operating pressures are within the tolerances.</li> </ol>			
		2. When plumbing, the motorized valve should be situated in an easily accessible place and sufficient space should be allowed for the removal of the actuator.			
		<ol> <li>To prevent moisture from collecting in the motor casing, install the motorized valve such that the actuator is superior to the valve, at 20-30° / at vertical. Avoid mounting the valve so that the valve stem is below horizontal.</li> </ol>
