Description
The TFC24F3XYZ3 is a fully configurable controller designed specifically for 2 pipe and 4 pipe fan coil applications. No additional modules are required as the required inputs, outputs and control algorithms are built into the unit.

Applications
- Heating, cooling and reheat
- 2 pipes or 4 pipes
- Auxiliary heating sources, such as electric baseboards, can also be applied

Features
- Backlit LCD with simple icon and text driven menus
- Configurable inputs and outputs
- 2 Pipes with Analog, ON/OFF, or Floating option
- 4 Pipes with Analog, ON/OFF, or with local reheat function
- 7 day Programmable Schedule
- 2 or 4 daily events
- Temporary Setpoint Override
- Precise temperature control with programmable PI function
- Selectable Fahrenheit or Celsius scale
- Independent cool and heat setpoint for No Occupancy
- Lockable setpoint, control mode, and fan mode
- Selectable internal or external temperature sensor
- Changeover by contact or external temperature sensor
- Selectable proportional control band and dead band
- Anti-freeze protection

Typical Application
Fan coil applications provide heating and cooling to a zone by circulating hot and cold air depending on the demand to maintain an optimum temperature in the selected space. A fan coil setup typically consists of fan coil units, source for hot and cold water, and a pipe system for distribution. When there is a demand for heating, the hot water is supplied to the unit through the source and passes over the heating coil, and the hot air is pushed into the zone by the fan. When there is a demand for cooling, the cold water is supplied to the unit through the source and passes over the cooling coil, and the cold air is pushed into the zone by the fan.

* Consult www.neptronic.com for details on these Neptronic products.

Wiring

We strongly recommend that all Neptronic products be wired to a separate grounded transformer and that transformer shall service only Neptronic products. This precaution will prevent interference with, and/or possible damage to incompatible equipment.

</tbody>
</table>
Mounting Instructions

CAUTION: Remove power to avoid a risk of malfunction.

A. Remove the captive screw that’s holding the base and the front cover of the unit together.
B. Lift the front cover of the unit to separate it from the base.
C. Pull all wires through the holes in the base.
D. Secure the base to the wall using wall anchors and screws (supplied). Make the appropriate connections.
E. Mount the control module on the base and secure using the screw.

Programming Mode

The Mode Selector Jumper JP3 must be set to the “PGM” mode (Programming Mode). Refer to Wiring on page 2. To exit, set the Jumper JP3 back to the “RUN” mode (Operation Mode). All changes will be saved.

Setpoint and User Control

1. “INSIDE TEMPER SENSOR OFFSET”
   
   **Range:** 10.0°C to 40.0°C [50°F to 104.0°F]
   **Offset:** Max. ± 5°C
   **Increment:** 0.1°C [0.2°F]

   Compare the displayed temperature reading with a known value from a thermometer. To offset or calibrate the sensor, use the arrows button to set the desired temperature reading. This is useful for thermostats installed in areas where the temperature read is slightly different than the room’s actual temperature. For example, a thermostat placed right under the air diffuser.
2. "ENABLE ON OFF CONTROL MODE"

Default: Yes (Enable)
Range: Yes (Enable)/No (Disable)

If you select Yes, the user can set the unit to “Off” via the Control Mode (see page 15). If you select No, the “Off” selection does not appear in the Control Mode.

Pipe System Selection

3. "SELECT 2 PIPE 4 PIPE SYSTEM"

Default: 2P (2 pipe)
Range: 2P (2 pipe)/4P (4 pipe)

Select the number of pipes that you want to use.

If you selected the 4 pipes option, go to Step 10.

4. "SELECT 2 PIPE SIGNAL"

Default: AnLG (Analog)
Range: AnLG (Analog), OnOf (On/Off), Flt (Floating)

Select the desired signal output for your 2 pipe system from the available options. The cooling ⬇️ and heating ⬆️ symbols are also displayed.

- If you select analog signal, AO1 will be set to automatic heat/cool changeover.
- If you select OnOf, TO1 will be set to automatic heat/cool changeover.
- If you select Flt, TO1 will be set to close and TO2 will be set to open.

If you selected AnLG (analog) signal, go to Step 6.
If you selected OnOf (on/off) signal, go to Step 8.

5. "SET FLOATING TIME IN SECONDS"

Default: 100 seconds
Range: 15 to 250 seconds
Increment: 5 seconds

This option appears if you have selected Flt at step 4. Select the desired value for the floating time signal and go to Step 8.

Outputs

6. "MIN VDC ANALOG OUTPUT"

Default: 0.0 Volt
Range: 0.0 to 10.0 Volt
Increment: 0.1 Volt

Select the desired minimum voltage (zero value) for the analog ramp. The minimum value (Step 6) is restricted by the maximum value (Step 7). In other words, the minimum value should be less than the maximum value.

7. "MAX VDC ANALOG OUTPUT"

Default: 10.0 Volt
Range: 0.0 to 10.0 Volt
Increment: 0.1 Volt

Select the desired maximum voltage (span value) for the analog ramp. The maximum value (Step 7) is restricted by the minimum value (Step 6). In other words, the maximum value should be greater than the minimum value.

8. "CH OVER TEMPER SENSOR"

Default: SENs (External Changeover Sensor)
Range: SENs, NoCl, NoHt

- If SENs is selected: heating mode activates when the temperature read by the external sensor is above the Changeover Setpoint and cooling mode activates when the temperature read by the external sensor is below the Changeover Setpoint. (see Step 9)
- If NoHt is selected: heating mode activates if the contact is opened and the cooling mode activates if the contact is closed. (see Step 9)
- If NoCl is selected: heating mode activates if the contact is closed and cooling mode activates if the contact is open.

If you selected NoCl or NoHt option, go to Step 16.
9. "CH OVER SETPTM TEMPER"

<table>
<thead>
<tr>
<th>Default</th>
<th>24.0°C [75°F]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range</td>
<td>10.0°C to 40.0°C [50°F to 104°F]</td>
</tr>
<tr>
<td>Increment</td>
<td>0.5°C [1°F]</td>
</tr>
</tbody>
</table>

This option appears if you have set one of the analog inputs to SENs (External Changeover Sensor) at Step 8. Set the desired changeover temperature setpoint. Note that the heating mode activates when the temperature read by the external sensor is above the changeover setpoint and cooling mode activates when the temperature read by the external sensor is below the changeover setpoint.

Go to Step 16.

10. "SELECT 4 PIPE HEATING SIGNAL"

<table>
<thead>
<tr>
<th>Default</th>
<th>AnLG (Analog)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range</td>
<td>AnLG (Analog), OnOf (On/Off), PULs (Pulse)</td>
</tr>
</tbody>
</table>

This option appears if you have selected 4P at Step 3. Select the heating signal for your 4 pipe system.

- If you select AnLG (Analog), AO2 will be set to heating.
- If you select OnOf (On/Off), or PULs (Pulse), TO2 will be set to heating.

If you selected OnOf or PULs signal, go to Step 13.

11. "MIN VDC ANALOG OUTPUT HEATING"

<table>
<thead>
<tr>
<th>Default</th>
<th>0.0 Volt</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range</td>
<td>0.0 to 10.0 Volt</td>
</tr>
<tr>
<td>Increment</td>
<td>0.1 Volt</td>
</tr>
</tbody>
</table>

Select the desired minimum voltage (zero value) for heating ramp. The minimum value (Step 11) is restricted by the maximum value (Step 12). In other words, the minimum value must be less than the maximum value.

12. "MAX VDC ANALOG OUTPUT HEATING"

<table>
<thead>
<tr>
<th>Default</th>
<th>10.0 Volt</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range</td>
<td>0.0 to 10.0 Volt</td>
</tr>
<tr>
<td>Increment</td>
<td>0.1 Volt</td>
</tr>
</tbody>
</table>

Select the desired maximum voltage (span value) for heating ramp. The maximum value (Step 12) is restricted by the minimum value (Step 11). In other words, the maximum value must be greater than the minimum value.

13. "SELECT 4 PIPE COOLING SIGNAL"

<table>
<thead>
<tr>
<th>Default</th>
<th>AnLG (Analog)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range</td>
<td>AnLG (Analog), OnOf (On/Off)</td>
</tr>
</tbody>
</table>

This option appears if you have selected 4P at Step 3. Select the desired cooling signal output for your 4 pipe system.

- If you select the AnLG (analog) signal, AO1 will be set to cooling.
- If you select the OnOf (on/off) signal, TO1 will be set to cooling.

If you selected the OnOf signal, go to Step 16.

14. "MIN VDC ANALOG OUTPUT COOLING"

<table>
<thead>
<tr>
<th>Default</th>
<th>0.0 Volt</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range</td>
<td>0.0 to 10.0 Volt</td>
</tr>
<tr>
<td>Increment</td>
<td>0.1 Volt</td>
</tr>
</tbody>
</table>

Select the desired minimum voltage (zero value) for cooling ramp. The minimum value (Step 14) is restricted by the maximum value (Step 15). In other words, the minimum value must be less than the maximum value.

15. "MAX VDC ANALOG OUTPUT COOLING"

<table>
<thead>
<tr>
<th>Default</th>
<th>10.0 Volt</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range</td>
<td>0.0 to 10.0 Volt</td>
</tr>
<tr>
<td>Increment</td>
<td>0.1 Volt</td>
</tr>
</tbody>
</table>

Select the desired maximum voltage (span value) for cooling ramp. The maximum value (Step 15) is restricted by the minimum value (Step 14). In other words, the maximum value should be greater than the minimum value.
16. "SET LOCAL REHEAT SIGNAL"

Default: OFF (no signal selected)

Select the desired signal output for reheat.

- If you select AnLG (Analog, heating and fan), AO3 will be set to reheat.
- If you select On/Off (On/Off heating and fan) or PuLS (Pulse heating and fan), TO3 will be set to reheat.

If you selected On/Off (On/Off heating and fan), or or PuLS (Pulse heating and fan), go to Step 19.

If you selected OFF, go to Step 21.

---

17. "MIN VDC ANALOG OUTPUT REHEAT"

Default: 0.0 Volt
Range: 0.0 to 10.0 Volt
Increment: 0.1 Volt

Select the desired minimum voltage (zero value) of reheat ramp. The minimum value (Step 17) is restricted by the maximum value (Step 18). In other words, the minimum value must be less than the maximum value.

18. "MAX VDC ANALOG OUTPUT REHEAT"

Default: 0.0 Volt
Range: 0.0 to 10.0 Volt
Increment: 0.1 Volt

Select the desired maximum voltage (span value) of reheat ramp. The maximum value (Step 18) is restricted by the minimum value (Step 17). In other words, the maximum value must be greater than the minimum value.

Control Ramps

19. "CONTROL RAMP REHEAT"

Default: 2.0ºC [4ºF]
Range: 0.5ºC to 5.0ºC [1ºF to 10ºF]
Increment: 0.5ºC [1ºF]

Select the desired value for the reheat proportional band. The heating ⚠ symbol is also displayed.

20. "CONTROL DEAD BAND REHEAT"

Default: 0.0ºC [0ºF]
Range: 0ºC to 5.0ºC [0ºF to 10.0ºF]
Increment: 0.1ºC [0.2ºF]

Select the desired value for the reheat dead band. The heating ⚠ symbol is also displayed.

21. "CONTROL RAMP HEATING"

Default: 2.0ºC [4ºF]
Range: 0.5ºC to 5.0ºC [1ºF to 10ºF]
Increment: 0.5ºC [1ºF]

Select the desired value for the heating proportional band. The heating ⚠ symbol is also displayed.

22. "CONTROL RAMP COOLING"

Default: 2.0ºC [4ºF]
Range: 0.5ºC to 5.0ºC [1ºF to 10ºF]
Increment: 0.5ºC [1ºF]

Select the desired value for the cooling proportional band. The cooling ⚠ symbol is also displayed.
23. "CONTROL DEAD BAND HEATING"
Default: 0°C [0°F]
Range: 0°C to 5.0°C [0°F to 10.0°F]
Increment: 0.1°C [0.2°F]
Select the desired value for the heating dead band. The heating \( \bullet \) symbol is also displayed.

24. "CONTROL DEAD BAND COOLING"
Default: 0°C [0°F]
Range: 0°C to 5.0°C [0°F to 10.0°F]
Increment: 0.1°C [0.2°F]
Select the desired value for the cooling dead band. The cooling \( \bullet \) symbol is also displayed.

Other Settings

25. "COOLING ANTI CYCLE MINUTES"
Default: 2 minutes
Range: 0 to 15 minutes
Increment: 1 minute
To protect the compressor, set the delay in minutes before activating or reactivating the cooling contact. The cooling \( \bullet \) symbol is also displayed.

26. "ADJUST INTEGRAL TIME IN SECONDS"
Default: 0 second
Range: 0 to 250 seconds
Increment: 5 seconds
Select the desired value for the integration factor compensation.

27. "ADJUST DAMPING FACTOR SECONDS"
Default: 0 second
Range: 0 to 10 seconds
Increment: 1 second
Select the desired value for the damping factor. The fan \( \bullet \) symbol and the cooling \( \bullet \) symbol are also displayed.

Fan Settings

28. "SELECT FAN SPEED SIGNAL"
Default: 3 (speed fan contact)
Range: 1 (speed fan contact), 2 (speed fan contact), 3 (speed fan contact), AnLG (Analog)
Select the desired fan speed. If you have selected the speed fan contact option, select the speed, and go to Step 31. The fan \( \bullet \) symbol is also displayed.

29. "MIN VDC ANALOG OUTPUT FAN"
Default: 0.0 Volt
Range: 0.0 to 10.0 Volt
Increment: 0.1 Volt
Select the desired minimum voltage (zero value) for fan ramp. The minimum value (Step 29) is restricted by the maximum value (Step 30). In other words, the minimum value should be less than the maximum value. The fan \( \bullet \) symbol is also displayed.

30. "MAX VDC ANALOG OUTPUT FAN"
Default: 10.0 Volt
Range: 0.0 to 10.0 Volt
Increment: 0.1 Volt
Select the desired maximum voltage (span value) for fan ramp. The maximum value (Step 30) is restricted by the minimum value (Step 29). In other words, the maximum value must be more than the minimum value. The fan \( \bullet \) symbol is also displayed.

31. "ENABLE FAN AUTO MODE"
Default: Yes (Enable)
Range: Yes (Enable)/No (Disable)
Select the Enable or Disable option to allow the user to adjust the Automatic mode. The fan \( \bullet \) symbol is also displayed.
32. "FAN AUTO TIMEOUT MINUTES"

| Default: 2 minutes | Range: 0 to 15 minutes | Increment: 1 minute |

Select the desired value for the automatic shutoff delay. The fan ⚡ symbol is also displayed.

33. "EXTERN SENSOR TEMPER"

| Default: OFF (input none rewired) | Range: OFF (input none rewired), t10.0 (external temperature sensor 10.0 KΩ) |

Select the sensor that should be rewired to the analog output.

- If you select OFF, the thermostat will be controlled by its internal temperature sensor.
- If you select t10.0, the thermostat will be controlled by an external temperature sensor.

If you selected the OFF option, go to Step 35.

34. "EXTERN TEMPER SENSOR OFFSET"

| Offset: Max. ± 5°C | Range: 0.0°C to 50.0°C [41.0°F to 122.0°F] | Increment: 0.1°C [0.2°F] |

This option appears if you have set one of the analog inputs to t10.0 (External temperature sensor 10.0 KΩ) at step 33. When the thermostat is connected to the appropriate analog input (AI1 or AI2), the display shows the temperature read by the external temperature sensor. Adjust the offset by comparing it with a known value (e.g., thermometer). If the sensor is not connected or short circuited, the display is blank "Error", and the error symbol ⚡ is displayed.

35. "ENABLE ANTI FREEZE PROTECT"

| Default: No (Disable) | Range: No (Disable)/Yes (Enable) |

If this option is enabled, heating starts automatically when the temperature drops to 4°C [39°F], even if the thermostat is in OFF mode. Once the temperature reaches 5°C [41°F], the heating stops.

Scheduling Mode Selection

This menu is accessible through normal operation mode.

1. The Mode Selector Jumper (JP3) must be set to "RUN" position (Operation Mode). Refer to Wiring on page 2.
2. Press the button for 5 seconds, the ⌚ symbol is displayed indicating that the Scheduling Mode has been activated.
3. Use the ▲ and ▼ arrow buttons to increase or decrease the values.
4. Press the ▲ and ▼ buttons to navigate through the program functions.

The thermostat will return to normal mode if you navigate through the entire menu and do not make any selection, or if you do not press any button for 5 minutes. The changed values will be saved automatically.

Time and Date

1. "SET TIME DISPLAY FORMAT"

| Default: 24 | Range: 12 hours, 24 hours | Selection: Desired time format |

Select the desired time format.

2. "SET HOURS"

| Range: 00 to 23 hours | Increment: 1 hour | Selection: Time in hours |

Set the time in hours.
3. **“SET MINUTES”**

   - Range: 00 to 59 minutes
   - Increment: 1 minute
   - Selection: Time in minutes

   Set the time in minutes.

4. **“ENTER YEAR”**

   - Default: 2010
   - Range: 2010 to 2099
   - Increment: 1
   - Selection: Year

   Select the year.

5. **“ENTER MONTH”**

   - Range: 01 to 12 (January to December)
   - Increment: 1 month
   - Selection: Month

   Select the month.

6. **“ENTER DAY”**

   - Range: 01 to 31 days
   - Increment: 1 day
   - Selection: Day

   Select the day.

**Scheduling and Internal Setpoint**

7. **“USED TIME SCHEDULE”**

   - Default: No
   - Range: Yes, No
   - Selection - No: Proceed to adjust the intern setpoint at Step 8 “adjust intern sepnt”.
   - Selection - Yes: Proceed to schedule events at Step 9 “select 2 or 4 events per day”

   Select whether you want to schedule events or not.

8. **“ADJUST INTERN SEPNT”**

   - Default: 22ºC [72ºF]
   - Range: 10ºC to 40ºC [50ºF to 104ºF]
   - Increment: 0.5ºC [1ºF]
   - Selection: Desired setpoint and proceed to Step 29 "user setpnt locked”.

   Desired temperature setting.

**Event Settings**

9. **“SELECT 2 OR 4 EVENTS PER DAY”**

   - Default: 2 Events
   - Range: 2 Events, 4 Events
   - Display: 2 Events, 4 Events
   - Selection - 2 Events: Refer to Step 10 “6:00, e1”
   - Selection - 4 Events: Refer to Step 16 “6:00, e1”

   Select the desired number of events per day. You can choose between 2 events or 4 events per day. This selection will be applied for each day of the week.

**Event 1 (2 Events/Day)**

10. **“6:00, E1”**

   - Default: 6:00
   - Range: 00:00 to Monday Event 2, start time -15 minutes
   - Increment: 15 minutes
   - Display: MO, E1, ☑

   Set the start time for Event 1 on Monday. The Monday Event 1 temperature setting will be effective from the time that is set here until the time set for the Event 2 on Monday.
11. "ADJUST EVENT 1 COOLING SEPNT"
   Default: 22°C [72°F]
   Range: 10°C to 40°C [50°F to 104°F], Off
   Increment: 0.5°C [1°F]
   Display: MO, E1, 
   Selection - Off: MO, E1,
   Proceed to Event 2 settings at Step 13, “20:00, e2”.

Select the desired cooling temperature setpoint for the duration of Event 1. The minimum value is restricted by the Event 1 heating setpoint, Step 12 “adjust event 1 heating sepnt”.

- If you select the Off option, the thermostat will be off for this duration.

12. "ADJUST EVENT 1 HEATING SEPNT"
   Default: 20°C [68°F]
   Range: 10°C to 40°C [50°F to 104°F]
   Increment: 0.5°C [1°F]
   Display: MO, E1, 
   Selection - Off: MO, E1,
   Proceed to Event 2 settings at Step 13, “20:00, e2”.

Select the desired heating temperature setpoint for the duration of Event 1. The maximum value is restricted by the cooling setpoint of Event 1, Step 11 “adjust event 1 cooling sepnt”.

---

**Event 2 (2 Events/Day)**

13. "20:00, E2"
   Default: 20:00
   Range: Monday Event 1 +15 minutes, Monday 23:45
   Increment: 15 minutes
   Display: MO, E2,
   Proceed to Event 2 settings at Step 13, “20:00, e2”.

Set the start time for Event 2 on Monday. The Monday Event 2 temperature setting will be effective from the time that is set here until the time set for the Event 1 on Tuesday.

14. "ADJUST EVENT 2 COOLING SEPNT"
   Default: 25°C [77°F]
   Range: 10°C to 40°C [50°F to 104°F], Off
   Increment: 0.5°C [1°F]
   Display: MO, E2, 
   Selection - Off: MO, E2,
   Proceed to the copy schedule section at Step 28 "copy schedul”.

Select the desired cooling temperature setpoint for the duration of Event 2. The minimum value is restricted by the Event 2 heating setpoint, Step 15 “adjust event 2 heating sepnt”.

- If you select the Off option, the thermostat will be off for this duration.

15. "ADJUST EVENT 2 HEATING SEPNT"
   Default: 16°C [61°F]
   Range: 10°C to 40°C [50°F to 104°F]
   Increment: 0.5°C [1°F]
   Display: MO, E2, 
   Selection - Off: MO, E2,
   Proceed to the copy schedule section at Step 28 "copy schedul”.

Select the desired heating temperature setpoint for the duration of Event 2. The maximum value is restricted by the cooling setpoint of Event 2, Step 14 “adjust event 2 cooling sepnt”.

---

**Event 1 (4 Events/Day)**

16. "6:00, E1"
   Default: 06:00
   Range: 00:00 to Monday Event 2, start time -15 minutes
   Increment: 15 minutes
   Display: MO,E1,
   Proceed to Event 2 settings at Step 13, “20:00, e2”.

Set the start time for event 1 on Monday. The Monday Event 1 temperature setting will be effective from the time that is set here until the time set for the Event 2 on Monday.
Fan Coil Thermostat Controller
Specification and Installation Instructions

17. "ADJUST EVENT 1 COOLING SEPNT"

| Default: 22°C | 72°F |
| Range: 10°C to 40°C | [50°F to 104°F], Off |
| Increment: 0.5°C | 1°F |
| Display: MO, E1, │ selection - Off: |

Select the desired cooling temperature setpoint for the duration of Event 1. The minimum value is restricted by the Event 1 heating setpoint, Step 18 "adjust event 1 heating sepnt".
- If you select the Off option, the thermostat will be off for this duration.

18. "ADJUST EVENT 1 HEATING SEPNT"

| Default: 20°C | 68°F |
| Range: 10°C to 40°C | [50°F to 104°F] |
| Increment: 0.5°C | 1°F |
| Display: MO, E1, │

Select the desired heating temperature setpoint for the duration of Event 1. The maximum value is restricted by the cooling setpoint of Event 1, Step 17 "adjust event 1 cooling sepnt".

Event 2 (4 Events/Day)

19. "20:00, E2"

| Default: 20:00 |
| Range: Monday Event 1 start time +15 minutes, Event 3 start time -15 minutes |
| Increment: 15 minutes |
| Display: MO, E2, │

Set the start time for Event 2 on Monday. The Monday Event 2 temperature setting will be effective from the time that is set here until the time set for the Event 3 on Monday.

20. "ADJUST EVENT 2 COOLING SEPNT"

| Default: 28°C | 82°F |
| Range: 10°C to 40°C | [50°F to 104°F], Off |
| Increment: 0.5°C | 1°F |
| Display: MO, E2, │ Proceed to Event 3 settings at Step 22 "22:00, e3". |

Select the desired cooling temperature setpoint for the duration of Event 2. The minimum value is restricted by the Event 2 heating setpoint, Step 21 "adjust event 2 heating sepnt".
- If you select the Off option, the thermostat will be off for this duration.

21. "ADJUST EVENT 2 HEATING SEPNT"

| Default: 16°C | 68°F |
| Range: 10°C to 40°C | [50°F to 104°F] |
| Increment: 0.5°C | 1°F |
| Display: MO, E2, │

Select the desired heating temperature setpoint for the duration of Event 2. The maximum value is restricted by the cooling setpoint of Event 2, Step 20 "adjust event 2 cooling sepnt".

Event 3 (4 Events/Day)

22. "22:00, E3"

| Default: 22:00 |
| Range: Monday Event 2 start time +15 minutes, Event 4 start time -15 minutes |
| Increment: 15 minutes |
| Display: MO, E3, │

Set the start time for Event 3 on Monday. The Monday Event 3 temperature setting will be effective from the time that is set here until the time set for the Event 4 on Monday.
23. **“ADJUST EVENT 3 COOLING SEPNT”**

<table>
<thead>
<tr>
<th>Default: 22°C</th>
<th>[72°F]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range: 10°C to 40°C</td>
<td>[50°F to 104°F], Off</td>

</tr>
<tr>
<td>Display: MO, E3,</td>
<td></td>
</tr>
<tr>
<td>Selection - Off:</td>
<td>Proceed to Event 4 options at Step 25 “23:45, e4”</td>
</tr>
</tbody>
</table>

Select the desired cooling temperature setpoint for the duration of Event 3. The minimum value is restricted by the Event 3 heating setpoint, Step 24 “adjust event 3 heating sepnt”.

- If you select the Off option, thermostat will be off for this duration.

24. **“ADJUST EVENT 3 HEATING SEPNT”**

<table>
<thead>
<tr>
<th>Default: 20°C</th>
<th>[68°F]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range: 10°C to 40°C</td>
<td>[50°F to 104°F]</td>
</tr>
<tr>
<td>Increment: 0.5°C</td>
<td>[1°F]</td>
</tr>
<tr>
<td>Display: MO, E3,</td>
<td></td>
</tr>
</tbody>
</table>

Select the desired heating temperature setpoint for the duration of Event 3. The maximum value is restricted by the cooling setpoint of Event 3, Step 23 “adjust event 3 cooling sepnt”.

Event 4 (4 Events/Day)

25. **“23:45, E4”**

<table>
<thead>
<tr>
<th>Default: 23:45</th>
</tr>

<tbody>
<tr>
<td>Range: Monday Event 3 +15 minutes, Monday 23:45</td>
</tr>
<tr>
<td>Increment: 15 minutes</td>
</tr>
<tr>
<td>Display: MO, E4,</td>
</tr>
</tbody>
</table>

Set the start time for Event 4 on Monday. The Monday Event 4 temperature setting will be effective from the time that is set here until the time set for the Event 1 on Tuesday.

26. **“ADJUST EVENT 4 COOLING SEPNT”**

<table>
<thead>
<tr>
<th>Default: 28°C</th>
<th>[82°F]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range: 10°C to 40°C</td>
<td>[50°F to 104°F], Off</td>
</tr>
<tr>
<td>Increment: 0.5°C</td>
<td>[1°F]</td>
</tr>
<tr>
<td>Display: MO, E4,</td>
<td></td>
</tr>
</tbody>
</table>

Select the desired cooling temperature setpoint for the duration of Event 4. The minimum value is restricted by the Event 4 heating setpoint, Step 27 “adjust event 4 heating sepnt”.

- If you select the Off option, the thermostat will be off for this duration.

27. **“ADJUST EVENT 4 HEATING SEPNT”**

<table>
<thead>
<tr>
<th>Default: 16°C</th>
<th>[68°F]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range: 10°C to 40°C</td>

</tr>
<tr>
<td>Display: MO, E4,</td>
<td></td>
</tr>
</tbody>
</table>

Select the desired heating temperature setpoint for the duration of Event 4. The maximum value is restricted by the cooling setpoint of Event 4, Step 26 “adjust event 4 cooling sepnt”.

Copy Schedule

The Copy Schedule program function enables you to copy the schedule of a particular day to another day, for example, copy Monday's schedule to Tuesday.

28. **“COPY SCHEDULE”**

<table>
<thead>
<tr>
<th>Default: No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range: Yes/No</td>
</tr>
<tr>
<td>Selection - Yes: The schedule of the day that you want to copy appears on the display. The day to which you want to copy the schedule to is highlighted.</td>
</tr>
<tr>
<td>Selection - No: Set the schedule for the day by choosing the 2 Events or 4 Events options.</td>
</tr>
</tbody>
</table>
Fan Coil Thermostat Controller
Specification and Installation Instructions

29. "USER SETPTMT LOCKED"
Default: No (Unlocked)
Range: Yes/No
Selection - Yes: The user setpoint option is locked and the user cannot adjust the desired setpoint temperature.
Selection - No: The user setpoint option is not locked and the user can adjust the desired setpoint temperature.

30. "ADJUST TEMPER CONTROL MODE"
Default: Auto (Automatic)
Range: Auto (Automatic), On (Cooling or Heating), Heat (Heating Only), Cool (Cooling Only)
Select the control mode that you want to authorize to the user. To authorize all the available modes, select Auto (Automatic Mode).

31. "USER CONTROL MODE LOCKED"
Default: No (Unlocked)
Range: Yes/No
Selection - Yes: The control mode is locked and the user cannot change any settings.
Selection - No: The user will be able to make changes.

32. "QUIT"
Default: Yes (Quit)
Range: Yes/No
Selection - Yes: You will exit from the Scheduling Mode and return to the Operation Mode.
Selection - No: You will remain in the Scheduling Mode.
Select whether you want to continue working in the Scheduling Mode or exit. If you want to revise your schedule, start over from Step 1 "Set time display format".

Operation Mode
The Mode Selector Jumper (JP3) must be set to the "RUN" mode (Operation Mode). Refer to Wiring on page 2. To exit, set the Jumper (JP3) back to the "PGM" mode (Programming Mode). All changes will be saved.
**Power Up**
Upon power up, the LCD illuminates and all segments appear for 2 seconds. The thermostat then displays its current version for 2 seconds.

**LCD Backlight**
Pressing any button on the thermostat illuminates the LCD for 4 seconds.

**Temperature**
The thermostat always displays the temperature reading. If the sensor is disconnected or short circuited then “OFF”, “- - -”, ▲ (alarm symbol) are displayed. To toggle the temperature scale between °C and °F, press both the △ and ▽ buttons for 3 seconds.

**Setpoint**
To display the setpoint, press the △ or ▽ button twice. The setpoint appears for 3 seconds. To adjust the setpoint, press the △ and ▽ buttons while the temperature is displayed.

**Setpoint Derogation Mode**
This function is only available if you have set the used time schedule option to Yes at Step 7 on page 10. If the schedule is triggered, the thermostat enters the Setpoint Derogation Mode (the ☄ symbol appears) and uses the heating and cooling setpoints defined at Steps 11, 12, 14, 15, 23, 24, 26, and 27 on pages 11 and 13.

The user can press the △ or ▽ button twice to adjust the setpoint if the option is not locked or set to No (unlocked) at Step 0 on page 14. The ☄ symbol flashes to indicate that the setpoint derogation period has begun. If the event symbol does not flash, it means that the derogation period is complete or that the adjustment is locked at Step 0 in Scheduling Mode Selection on page 9. If the setpoint is locked, a ⚠ symbol and “SETPT LOCKED” message appear.

**Control Mode**
These selections can vary according to the selection made at Step 2 of Programming Mode and Step 30 of Scheduling Mode.

- Auto (Automatic Cooling or Heating)
- Cooling only (on)
- Heating only (on)
- OFF

**Fan Speed Selection Mode**
To access the Fan Speed selection mode, press the 🎈 button. The mode appears for 5 seconds. These options can vary depending on the fan speed signal and auto mode settings at Step 28 and Step 31 on page 8.

- Automatic speed. This option is available if you have selected Yes (Enable) at Step 31 in Programming Mode.
- Low speed
- Medium speed
- High speed
- Off
