A Wide Range of HVAC Products

Founded in 1976, Neptronic is a private corporation that designs, manufactures and distributes products for the HVAC industry. Our product line includes intelligent controllers, electronic actuators, actuated valves, humidifiers and electric heaters.

Our products are designed and manufactured by over 250 dedicated employees in our 7,500 m2 (80,000 ft²) state-of-the-art facility located in Montreal, Canada. Using a vertical integration model, our entire manufacturing chain is under one roof from software and hardware development, to SMT circuit board assembly, to sheet metal fabrication, to product testing ensuring that our products are engineered to last.

With our continued commitment to research and development, we provide innovative products and technologies for the ever evolving challenges of the HVAC industry. We are ISO 9001:2008 certified and committed to supplying reliable products and quality service around the world. Exporting over 85% of our sales, we have an exclusive distribution network around the globe that provides comprehensive solutions to our worldwide customers.
A Neptronic Innovation: Heater Selection Software

Neptronic is the first manufacturer of electric heaters to offer to its clients, the possibility to obtain specifications directly on our web site: www.neptronic.com.

Our selection software allows access to technical data and formulas to specify Neptronic heaters and much more.

Whether you are an engineer or a contractor, our software allows you to select the required electric heater by entering basic data (duct dimensions, airflow, power, voltage, number of stages, control signals, etc.) from a user friendly window. The selection software then calculates the optimum specifications for each electric heater.

The comprehensive heater specifications, as well as the approval list, may be edited or inserted in the project file.

Easy to Select

You are in control of all your projects and will be able to assign your own reference numbers. Modifications are made directly from your computer.

To obtain a price, forward the selected list of heaters to one of our representatives for fast and efficient service.

The unique selection software allows data to be transferred automatically between the representatives and our manufacturing plant, eliminating errors that can arise during data transfer.
The Neptronic electric heater is manufactured using the most advanced technologies available:

- Total automation from design to production using integrated CAD/CAM systems not only assures maximum efficiency, but also prevents errors in the transfer of plans and specification data between the client, the R&D department and manufacturing personnel.

- The most advanced CNC technology for sheet metal fabrication is used in manufacturing the heaters.

All these factors were key in designing a complete line of electric heaters that are sturdy, easy to install and which include standard features that our competitors offer only as options, such as control panel doors with removable hinges.

Fast and Efficient Manufacturing

A Guarantee of Quality

Modern equipment allows us to respond in record time to your needs and to the most demanding specifications.

This infrastructure is supported and managed by our highly skilled specialists to whom quality workmanship is of utmost importance.
OVERVIEW & MECHANICAL CONSTRUCTION
OVERVIEW

fig.2.1

Disconnect switch
Control terminal block
Line voltage terminal block
Stage fuses
Transformer
Contactor
Control panel
Protective screen
2 knockouts
Slip-In type frame
**DESCRIPTION OF COMPONENTS**

- **Magnetic Contactor**
  Provides power to the individual stages of the heater.
  *Standard*

- **Transformer**
  Supplies power to the control circuit. Supplied with a fuse.
  *Standard*

- **Automatic Reset Thermal Cut-Out**
  An automatic reset, primary safety device. Removes power from elements if overheating occurs.
  *Standard*

- **Airflow Switch**
  Safety component used to prevent a heater from operating if there is no airflow.
  *Standard for ON/OFF heaters*

- **Solid State Relay (SSR)**
  Proportionally controls the amount of power transmitted to the heating elements. Allows quiet operation and is exceptionally reliable.
  *Standard for proportional heaters*

- **Manual Reset Thermal Cut-Out**
  A secondary safety device which removes power to the elements if overheating occurs.
  *Standard when required by code, otherwise optional*

- **Neptronic HEC Electronic Controller**
  A unique control and safety component. Controls and optimizes the power transmitted to the heating elements according to the duct temperature and air flow.
  *Standard for proportional heaters.*

- **Pneumatic Electric Switch**
  Converts a pneumatic ON/OFF signal to an electric signal.
  *Standard for heaters with pneumatic ON/OFF signal*

- **Pneumatic Electric Control**
  Converts a proportional pneumatic control signal to a proportional electric signal.
  *Standard for proportional units with pneumatic signal*

- **Disconnect Switch**
  Cuts the power supply to the heater in order to safely perform installation and maintenance tasks.
  *Standard when required by code, otherwise optional*

- **Fuses**
  Protect the total load and/or the individual heater stages.
  *Standard when required by code, otherwise optional*

- **Mercury Contactor**
  Provides power to the individual stages of the heater. Allows quiet, reliable operation.
  *Optional*
MECHANICAL CONSTRUCTION
**Slip-In Electric Heater - Type I**

The slip-in type electric heaters are designed so that the entire frame can be inserted into the duct.

**Advantages of slip-in electric heaters:**

A system using a slip-in heater permits the installation of the entire ventilation duct system before the heaters become available. Retrofits are much simpler, smaller dimension slip-in heaters require no extra supports.

To order a Neptronic slip-in heater, specify the dimensions of the duct and the selection software will automatically calculate the optimum heater dimensions.

**Installation:**

Allow for a proper sized opening on one side of the duct, see fig. 2.2, as well as installation clearances to avoid any obstructions around the duct. The Neptronic slip-in heater has a standard 1" (25.4mm) flange on each side of the control box and can be attached directly to the duct with sheet metal screws.

**Flanged Electric Heater - Type F**

Flanged heaters are designed so that the heater is an integral part of the duct work. The heater frame is attached to matching duct flanges, see fig. 2.3. Standard 1" (25.4mm) on the heater frame are used to attach it to the duct.

Flanged heater dimensions match the dimensions of the duct. Custom flanges can be provided for heaters requiring extra support or for large heaters.

**Installation:**

The Neptronic electric heater comes with 1" (25.4mm) standard flanges installed around the frame and on each side of the control box. It can be attached directly onto the duct with sheet metal screws.

**Note:** Round collar option available with flanged electric heater type F
Round Collar option

Round collar electric heaters are available for installation on round duct systems with a standard diameter of 6” to 24” (152mm to 609mm). They are provided with one male and one female adapter for ease of installation.

Installation:

The Neptronic round collar electric heater comes with a 1” (25.4mm) extension on each side of the frame. The heater is attached directly onto the duct using sheet metal screws.

Zero Clearance Construction

All Neptronic heaters are designed and approved for zero clearance to combustible material. Zero clearance construction means that there is no restriction on the distance between combustible materials and the section of the duct housing the heater, or the heater itself. The control panel must be accessible for servicing.

Horizontal or Vertical Mounting

Neptronic electric heaters are designed to be installed in either horizontal or vertical ducts. Please specify the airflow direction with an H for horizontal and a V for vertical to ensure correct orientation of the components in the control panel.

Optional Accessories:

Protective Screens:

Optional protective screens are available to prevent accidental contact with the heating elements.

Option 10 or 01: Protective screens on one side only - 10 left of the control panel, 01 right of the control panel.
Option 11: Protective screens on both sides of the heater.
Standard Control Panel

The control panel attached to the heater exceeds the frame dimensions by 1" (25.4mm) on the top and bottom. If installation conditions do not allow for this standard extension, a control panel with dimensions equal to the heater frame can be provided.

The standard extension of the control panel is to the left. If installation conditions do not permit the extension to the left, you must specify the direction for the extension of the control panel.

Control Panel Options

Bottom Control Panel

A bottom control panel can be supplied, when required for easy installation and maintenance. This option is available for all heaters (Slip-in, flanged and round collar) of small dimensions.

Insulated Control Panel

An insulated control panel is recommended for high duct temperatures. Insulation material, 1" (25.4mm) thick is installed between the panel and the hot area to prevent condensation on electrical components.

Remote Control Panel

In certain cases it may be more convenient to install the control panel remotely from the heater or in a separate room. A remote control panel can be supplied upon request.
Enclosure Types (control panels)

**Nema 1**  
*(IP 10)*  
Protected against access  
Enclosures constructed for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment and to provide a degree of protection against falling dirt.  
This enclosure type is standard on Neptronic electric heaters.

**Nema 12**  
*(IP 52)*  
Dust-protected  
Enclosures constructed (without knockouts) for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt; against circulating dust, lint, fibers, as well as water spray and light splashing of liquids, water infiltration, oil or non corrosive liquid refrigerant.

**Nema 4**  
*(IP 56)*  
Protected against splashing water  
Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt, rain, sleet, snow, windblown dust, splashing water, and hose-directed water; and that will be undamaged by the external formation of ice on the enclosure.

**Nema 4X**  
*(IP 65)*  
Protected against corrosion  
Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt, rain, sleet, snow, windblown dust, splashing water, and hose-directed water, and corrosion; and that will be undamaged by the external formation of ice on the enclosure.  
The control panel and/or the electric heater are constructed in stainless steel for this option.
Special Electric Heaters

Heater with Cold Section

In special cases a cold section in the air duct is required. For example, when air flow has been altered near the area where the heater is located. In this case the heater will be built in order to adapt to this constraint. Specify the location and dimensions of the cold section(s) using the control panel as your reference point. (see fig. 2.10)

Large Heaters

Heaters whose dimensions exceed 40” (1.0m), will be reinforced by Neptronic to assure proper rigidity. Multiple thermal cut-outs will be installed and evenly distributed to obtain the same level of safety as for a standard size heater. In some cases, the large heater will be constructed in two sections to simplify the installation.

Process Heaters

Special application heaters for baking, drying or other processes up to a temperature of 1,200ºF (648ºC) and 1,000kW can be designed and built to Neptronic's proven standards.
Materials

Neptronic heaters are manufactured with the appropriate galvanized steel gauge to assure rigidity and corrosion protection. Neptronic heaters can be constructed with 304 stainless steel for special applications.

Typical Dimensions

Type I (slip-in)

Type F (flanged)

Round collar option with type F

W: Width of air duct  H: Height of air duct
Open Coil Elements - Model C

Standard open coil elements are NiCr 60 (grade C). They are composed of 60% Nickel, 16% Chrome and the balance is Iron. The maximum operating temperature is 1,850ºF (1,000ºC). For applications in a humid environment, we recommend the optional NiCr 80 (grade A) elements. They are composed of 80% Nickel and 20% Chrome (does not contain iron). This will allow a maximum operating temperature of 2,100ºF (1,150ºC) and installation where condensation may be present in the air duct.

Standard Tubular Elements - Model T

Tubular elements are made of Incoloy 840 (Nickel alloy) tube with a diameter of 7/16" (11mm) containing a heating coil in magnesium oxide powder. Connections are made with two terminals (10-32). The U or W shape of the tubular elements is determined by the heater dimensions.

Option: Tubular element can be made in stainless steel 316L upon request.

Finned Tubular Elements - Model F

Finned tubular elements are made of steel tubes with a diameter of 7/16" (11mm) containing a heating coil in magnesium oxide powder. The tube is equipped with steel fins to allow for more efficient heat dissipation. Attachments are made with two terminals (10-32). The U or W shape of the tubular elements is determined by the heater dimensions.

Option: Tubes can be supplied in stainless steel 316L with stainless steel 304 fins upon request.
Selection Guide

<table>

Static Pressure Loss

![Graph showing static pressure loss vs. air velocity for different element types](fig.2.19)
SELECTION AND INSTALLATION TIPS

Calculation of Required Capacity

**Imperial**

\[
kw = \frac{CFM \times (T^2 - T'^1) \times 1.08}{3413}
\]

- **kw**: Power in kW
- **CFM**: Air volume in cubic feet per minute
- **T^2**: Temperature of air leaving heater in °F
- **T'^1**: Temperature of air entering heater in °F

**Metric**

\[
P = \frac{Q \times (T^2 - T'^1) \times 1.21}{3600}
\]

- **P**: Power in kW
- **Q**: Air volume in m³/hr
- **T^2**: Temperature of air leaving heater in °C
- **T'^1**: Temperature of air entering heater in °C

Minimum Air Velocity

**Open Coil Elements**

![Graph showing minimum air velocity for open coil elements with different temperature ranges.]

**Tubular Elements**

![Graph showing minimum air velocity for tubular elements with different temperature ranges.]

fig.2.20

fig.2.21
Air Flow Conditions

Basic rules:

- Allow a minimum distance of 3 times the duct diameter between any obstacle or elbow and the electric heater.
- Airflow must be evenly distributed across the duct.

If these basic rules are not respected overheating may result.

⚠️ If the electric heater is located too close to a filter or diffuser, 3 overheating areas may occur (fig. 2.22).

⚠️ If the electric heater is located too close to a fan, 2 overheating areas may occur (fig. 2.23).

⚠️ If the electric heater is located too close to an elbow, 1 overheating area may occur (fig. 2.24).

⚠️ If the electric heater is located too close to a transition, 2 overheating areas at the edges of the heater may occur (fig 2.25).

If one of these overheating conditions exists, the life expectancy of the heating elements will be affected. We advise that the basic rules stated above be followed. If these conditions cannot be avoided, Neptronic can provide cold sections in the appropriate areas of the electric heater (see the section on special electric heaters fig.2.10).
Electric Heater Current Calculation

**Single phase**

\[ IE = \text{Current through element in Amps} \]
\[ VE = \text{Element Voltage in Volts} \]
\[ IL = \text{Line Current in Amps} \]
\[ VL = \text{Line Voltage in Volts} \]
\[ P = \text{Power in Watts} \]

**Three phases**

- Delta connection
  \[ IE = \frac{IL}{1.732} \]

- Wye connection
  \[ IL = IE \]

\[ VE = \frac{VL}{1.732} \]

Voltage Selection

In order to avoid overheating due to inappropriate voltage, we recommend selecting Neptronic standard voltages as listed below:

**Single phase**

<table>
<thead>
<tr>
<th>Common Voltages</th>
<th>110V</th>
<th>115V</th>
<th>208V</th>
<th>220V</th>

</tr>
</tbody>
</table>

Please carefully select the supply voltage of the electric heater. Over estimation of the supply voltage may result in inadequate performance of the electric heater due to under capacity. Any under-estimation of the supply voltage may cause an increase in current and power and by consequence safety issues. Please consult your Neptronic representative for any non-standard voltage.
Electric Control

ON/OFF Control

The control panel of an ON/OFF electric heater includes the following components:

- Transformer and control fuse
- Automatic reset thermal cutout
- Manual reset thermal cutout when required by code, otherwise optional
- Airflow switch
- Contactor(s)
- Fuses when required by code, otherwise optional
- Disconnect switch when required by code, otherwise optional

Operation:
A thermostat dry contact activates each stage of the electric heater. Besides wiring of the power supply, you must connect the appropriate wires to the thermostat (see wiring diagram figure 3.18).

Proportional Control (Modulating)

The control panel of a proportional electric heater includes the following components:

- Transformer and control fuse
- Automatic reset thermal cutout
- Manual reset thermal cutout when required by code, otherwise optional
- Neptronic HEC controller
- Contactor(s)
- Solid state relay(s) (SSR)
- Fuses when required by code, otherwise optional
- Disconnect switch when required by code, otherwise optional

Operation:
An electric signal from a proportional thermostat is transmitted to the HEC controller. The HEC activates the proportional stage of the electric heater. The other stages are generally ON/OFF and are controlled by the HEC controller. Besides wiring of the power supply, you must connect the appropriate wires to the thermostat (see wiring diagram figure 3.19).
**Pneumatic Control**

**ON/OFF Control**

The control panel of an ON/OFF electric heater with pneumatic input includes the following components:

- Transformer and control fuse
- Automatic reset thermal cutout
- Manual reset thermal cutout when required by code, otherwise optional
- Airflow switch
- Pneumatic switch/proportional
- Contactor(s)
- Fuses when required by code, otherwise optional
- Disconnect switch when required by code, otherwise optional

**Operation:**

A pneumatic signal from a pneumatic thermostat activates the different stages of the electric heater. Besides wiring of the power supply, you must connect a 1/4" (6mm) diameter, pneumatic signal tube onto the pneumatic electric switch (see wiring diagram figure 3.20).

---

**Proportional Control (Modulating)**

The control panel of a pneumatic proportional electric heater includes the following components:

- Transformer and load fuse
- Automatic reset thermal cutout
- Manual reset thermal cutout when required by code, otherwise optional
- Neptronic HEC controller
- Pneumatic electric controller
- Contactor(s)
- Solid state relay(s)
- Fuses when required by code, otherwise optional
- Disconnect switch when required by code, otherwise optional

**Operation:**

A proportional signal from a pneumatic thermostat is transmitted to the HEC controller. The HEC activates the proportional stage of the electric heater. The other stages are generally ON/OFF and are controlled by the HEC controller. Besides wiring of the power supply, you must connect a 1/4" (6mm) diameter, pneumatic signal tube onto the pneumatic electric module (see wiring diagram figure 3.21).
Magnetic Contactor - code: CA

Magnetic Contactors are the Neptronic standard. They are reliable and field proven. They have been tested for a minimum of 250,000 operations.

Features:
- Coil Voltage: 24 or 120VAC
- Resistive Load from 25 to 50A at 600 VAC 50/60Hz
- Number of Poles: 1, 2, or 3

Transformer (supplied with a control fuse) - code: TR

A transformer is standard on Neptronic electric heaters. The transformer supplies power to the control circuit. If you prefer that the control power be supplied by others, you must specify this with your order.

Features:
- Primary Voltage: same as that of electric heater
- Secondary Voltage: 24 or 120 VAC from 25 to 250VA
- Insulation: Class B

Automatic Reset Thermal Cutout - code: AC

Standard for all Neptronic electric heaters. If overheating occurs, the automatic reset will remove power from the elements.

Features:
- Maximum Voltage and Current: 240VAC, 25A
- Cut-off Temperature:
  - Open coil elements: 110°F (43°C)
  - Tubular elements: 167°F (75°C)

Airflow Switch - codes: PDN or PDA

A non-adjustable airflow switch (PDN) is standard for all ON/OFF Neptronic heaters. Prevents heater from operating if there is no airflow.

Features:
- Triggering Pressure: 0.03+-0.02” w.c. (0.762+-0.508mm w.g.) - adjustable optional (PDA)
- Maximum Pressure: 0.5psi (3.5kPa)
- Maximum Voltage and Current: 227V, 15A
- Tube Connections: 2 nozzles (6.35mm)
- Accessories: supplied with 3’ (914mm) pitot tube to be installed in the duct.

Solid State Relay - code: SSR

Standard for proportional Neptronic heaters. Proportionally controls the amount of power transmitted to the heating element.

Features:
- Maximum Voltage: 600V
- Current: 50A, 100A or 125A
- Zero voltage crossing detection and switching
**Manual Reset Thermal Cutout** - code: MC

Standard when required by code, otherwise optional. Optional for all other electric heaters. If overheating occurs, the device must be manually reset.

**Features:**
- Maximum Voltage and Current: 240V, 25A
- Cut-off temperature adapted to:
  - Open coil elements
  - Tubular elements

**Pneumatic Electric Switch (ON/OFF) - code: PSO or PSC**

Standard for heaters with pneumatic ON/OFF signal. Transmits the pneumatic signal to the electric circuit.

**Features:**
- Pneumatic Signal: from 2 to 20psi (14 to 138 kPa)
- Maximum Pressure: 30psi (207 kPa)
- Maximum Voltage and Current: 277V, 25A
- Pneumatic Connection: 1, 3/16" (5mm) nozzle for 1/4" (6mm) O.D. polyethylene tube
- Normally Open (PSO) or Normally Closed (PSC)

**Pneumatic Electric Controller - code: PCD or PCR**

Standard for modulating electric heaters with proportional pneumatic control signal. Transmits proportional pneumatic control signal to the control circuit.

**Features:**
- Pneumatic Signal: 0 to 15psi (0 to 103 kPA)
- Direct (PCD) or Reverse (PCR) Acting
- Output Signal: 0 to 10VDC
- Supply Voltage: 12 or 24VAC
- Pneumatic connection: 2 3/16" (5mm) nozzles for 1/4" (6mm) O.D. polyethylene tube

**Pilot Lights - codes: LP, LH, LN, LS or LO**

Pilot lights are optional for all heaters. Pilot lights can indicate any of the following:
- Line Power ON (LP)
- Electric heater ON/OFF (LH)
- No airflow (LN)
- Stage ON (LS)
- Overheat (LO)

Pilot lights are installed on the front door of the control panel.

**Features:**
- Voltage and Amperage: 24V, 0.073A or 120V, 0.025A
- Color: Red or Green depending on application.
ELECTRICAL COMPONENTS

Disconnect Switch - codes: DS or TS
A disconnect (DS) with door interlock or a toggle switch (TS) is optional (except when required by code). Cuts the power supply to the heater in order to safely perform installation and maintenance tasks. The disconnect switch with door interlock (DS) prevents the control panel from being opened if the heater is powered. It is installed on the door of the control panel.

Features:
Number of Poles: 3
Maximum Voltage and Current: 600V, 800A

Fuses - code: SF or LF
Fuses are optional, except when required by code. They can be installed either on the supply line (LF) and/or on the individual heater stages (SF). They protect the total load if overheating or a short circuit occurs. Characteristics depend on current flow.

Features:
Maximum Voltage: 600VAC
Current: from 1 to 600A
Type: HRC form 1 (fast acting)

Mercury Contactor - code: CM
For special applications where quiet operation is required, magnetic Contactor can be replaced with optional mercury Contactor. Mercury Contactor have been tested for a minimum of 5,000,000 operations.

Features:
Coil Voltage: 24 or 120VAC
Resistive Load: 35A at 600VAC, 50/60Hz
Number of Poles: 1

Silent Relay - code: CS
As an alternative to mercury contactor, silent relay can be supplied in option. These relays are for special quiet operations.

Features:
Coil Voltage: 24VAC
Resistive Load: - 26.0A at 120, 208, 240, 277VAC ; 60 Hz
- 13.6A at 480VAC ; 60 Hz
- 10.4A at 600VAC ; 60 Hz
Number of Poles: 2

Auxiliary Switches - code: AUX
Auxiliary switch can be installed in option when the 3 pole standard magnetic contactor has been selected. When you need a remote dry contact with quick connect terminals. (maximum 2 per contactor)

Features:
Number of Poles: 2 (1 N.O. & 1 N.C.)
Contact Rating: 10A at 600VAC
The Neptronic HEC is a universal controller. It accepts any input signal used in the industry and converts it to a modulating or ON/OFF control signal to the solid state relay(s) and/or the contactor(s).

This controller assures an extra level of safety by precisely measuring the air velocity and continuously updating the proportional control signal to the heater. This avoids tripping the thermal cutouts for VAV applications, if the air filters are dirty or if there is an obstruction in the duct.

The Neptronic HEC universal controller considers only convection heat and differential temperature. It continuously updates the signal to the solid state relay. The result is an extremely precise control of heater output.

Features:

Inputs

- Analog: 0-10 VDC, 2-10 VDC or 4-20 mA.
- Pulsed: AC pulsed to ground, AC pulsed to 24 VAC or DC pulsed to ground.
- Pneumatic: modulating 0-15 PSI, direct or reverse action.
- Resistive NEP signal: from STS3 room thermostat, ITO3 setpoint controller + STC8-13 duct sensor or ITO3 setpoint controller + WS100 wall sensor.

Outputs

- TPM signal: 1-24 VDC for solid state relay.
- ON/OFF: Up to 4 step control for ON/OFF stages (standard), additional steps optional, Hybrid control - Sequential or Binary.
- Option: Fan relay for fan contact or pilot light contact.

Internal setpoint Option

Internal Setpoint option allows you to control the temperature setpoint with a potentiometer directly installed onto the HEC board. In this case, the electric heater will only be connected to a STR1 wall sensor or a STC8-13 duct sensor.

Patented EAS (Electronic Air Flow Sensors) US 7, 012, 223

- Accurate air flow readings without using air flow switches
- Lowers capacity if velocity is insufficient
- Operates as low as 100FPM (ideal for VAV applications)
- Additional heater element overheat protection
- Eliminates need to define air flow orientation

*Available for modulating open coil models under 40kW and less than 3ft x 3ft
Typical Wiring Diagrams

Three phase supply
ON/OFF electric signal - 2 stages
(Equipped with disconnect switch, stage fuses and airflow switch options)

THERMOSTATS AND SENSORS
Duct Mount Temperature Sensor - STC8-13

The Neptronic STC8-13 duct sensor transmits temperature of the air to be heated. The required setpoint can be adjusted directly on the Neptronic HEC controller with the internal setpoint option or by using the Neptronic ITO3 setpoint controller or with a Neptronic TRO5404 thermostat. The control logic is integrated into the Neptronic HEC controller installed in the electric heater control panel.

When using STC8-13 + ITO3, the ITO3 can be installed on a wall or on the duct close to the STC8-13.

- High accuracy and stability
- Fast thermal response
- Epoxy encapsulated sensor
- Extended durability
- Resistor/Temperature Curve
  - “G” matched (STC8-11, 10KΩ)
  - “A” matched (STC8-13, 3.3 KΩ)

Operation:

The STC8-13 is installed directly onto the ventilation duct by inserting the tube with the temperature sensor into the duct, downstream of the electric heater. The two wires of the STC8-13 sensor are connected directly onto the ITO3 setpoint controller (or TRO5404 thermostat) which is then connected to the Neptronic HEC controller located in the electric heater control panel or directly to the Neptronic HEC controller if internal setpoint option has been chosen. Two 18AWG wires are required for any of these connections.

Wall Mount Temperature Sensor- STR1

- Available with 10KΩ (STR1-11) or 3.3KΩ (STR1-13) thermistor
- High accuracy and stability
- Negative Temperature Coefficient (NTC)
- Compatible with Neptronic products
The TRO24-EXT1 is a combination controller and thermostat. The VAV Thermostat Controller is designed for simple and accurate control of any variable air volume box in a number of zone control configurations. Its field configurable algorithms enable versatile implementation of required control sequences.

Features:

- Configurable inputs and outputs
  - 4 TRIAC outputs (on/off, pulsed, or floating)
  - 2 analog outputs (0-10Vdc heat/cool)
  - 3 analog sensor inputs
- Precise temperature control with programmable PI function
- Selectable Fahrenheit or Celsius scale
- Extended setpoint range
- Manual night set back override
- Multi level lockable access menu and setpoint
- Selectable internal or external temperature sensor (10 KΩ)
- Changeover by contact or external temperature sensor
- Pressure sensor input with air flow program
- Selectable proportional control band and dead band

Specifications:

- Power supply: 22 to 26Vac 50/60Hz
- Power consumption: 1VA
- Setpoint range: -30ºC to 90ºC (-22ºF to 194ºF) with external sensor
- External sensor range: -40ºC to 100ºC (-40ºF to 212ºF)
- Proportional Band: 0.5ºC to 5ºC (1ºF to 10ºF) adjustable
The Neptronic TRO5404 thermostat is for room temperature control applications. Two heating and two cooling output ramps are available. It includes 0-10 VDC proportional output signals for heating and cooling ramps and a TPM (time proportional modulation) output for heating. A NSB (night set back) input is available to use a different heat/cool setpoint for energy savings during unoccupied periods. An internal temperature sensor is standard with the TRO5404, however an external sensor (STC8-13) may be used.

**Features:**
- Setpoint range: 10º to 35ºC (50º to 95ºF)
- Power Supply: 22 to 26Vac
- Proportional Band: 0.5ºC to 4ºC (1ºF to 8ºF) adjustable
- Power consumption: 2VA
- Output Signals:
  - Proportional heating and cooling: 0-10VDC (2 heating and 2 cooling ramps)
  - One TPM heating ramp: 0 or 22 VDC
- NSB input (day/night adjustment)

**Operation:**

**Proportional Mode:**
The TRO5404 adjusts the 0-10VDC output signal proportionally to the difference between measured temperature and setpoint temperature.

The proportional band is adjustable between 0.5ºC to 4ºC (1ºF to 8ºF). With a 4ºC (7ºF) proportional band, a difference between the measured temperature and the setpoint temperature of 2ºC (3.5ºF) results in a 50% demand corresponding to 5VDC. The second proportional heating or cooling ramp may be used as a high demand signal.

**TPM Mode (time proportional modulating) for Heating:**
This mode allows the adjustment of a TPM period of 2 seconds proportional to the difference between measured temperature and setpoint temperature. The output voltage is a 24VDC pulse.

The proportional band is adjustable. With a 4ºC (7ºF) proportional band, a difference between the measured temperature and the setpoint temperature of 2ºC (3.5ºF) results in a 50% demand corresponding to 24VDC, half the time, i.e. every other second.

**NSB Mode (day /night setting)**
The NSB input is used to identify unoccupied periods, which use a separate cooling and heating setpoint for increased energy savings.
Wall Mount Thermostat- STS3

The Neptronic STS3 wall mounted thermostat allows setpoint adjustment directly in the room where it is installed. The control logic is integrated into the Neptronic HEC controller installed in the electric heater control panel. This design makes the STS3 elegant, simple and affordable.

- Adjustable setpoint with mechanical lock
- Scale: Celsius or Fahrenheit
- Compatible with STC8-13 duct mounted temperature sensor in installations with Neptronic series duct heaters.
- Setpoint range: 14°C to 30°C (57°F to 86°F)

Operation:
The STS3 is installed directly on the wall. The two temperature sensor wires are connected to the Neptronic HEC controller located in the electric heater using two 18AWG wires.

Wall Mount Controller for Make-Up Air- TMA54

The TMA54-EXT1 thermostat is designed for controlling an electric heater in a make-up air unit. This unit features a fully configurable Proportional-Integral-Derivative (PID) and can connect up to 5 outputs at one time.

Features:

- Configurable proportional-integral-derivative (PID)
- 2 Analog cooling outputs (0-10Vdc)
- 2 Analog heating outputs (0-10Vdc)
- TPM output (time proportional output)
- Selectable internal/external temperature sensor
- Manual Night Set Back (NSB) input
- NSB override
- Configurable NSB cooling and heating setpoints

Specifications:

Power supply: 22 to 26Vac 50/60Hz
Power consumption: 2VA
Setpoint range: 0°C to 60°C (32°F TO 140°F)
Internal temperature sensor: 0°C to 50°C (32°F to 122°F)
External temperature sensor: 10k Ω type 3 | Range: -40°C to +100°C (-40°F to +212°F)
Proportional band: 0.5° to 20° (1° to 40°F) adjustable
This specification summary is designed to help you make a quick selection among the many available options.

### 1 - Selection of heating elements

- Model C - Open coil elements
  - Grade C
  - Grade A
- Model T - Standard tubular elements
  - Incoloy 840
  - Stainless Steel 316L
- Model F - Finned tubular elements
  - Steel (w. steel fins)
  - SS 316L (w. SS 304 fins)

### 2 - Selection of duct type (Installation)

- Type I - Slip-in
- Type F - Flanged
  - 1" (25.4mm) flange
  - 1.5" (38mm) flange
  - Round collar option

### 3 - Control panel details

- Standard control panel
  - Extends 1" (25.4mm) on top and bottom
  - Left extension (if required)
- Special extension
  - Right extension
  - Top extension
  - Bottom extension
  - Centered extension
- Control panel on the bottom
- Control panel on the top
- Insulated control panel
  - 1" (25.4mm) thick insulation
- Control panel flush with duct
  - Flush with top of duct
  - Flush with bottom of duct
- Remote control panel

### 4 - Special electric heaters

- Electric heater with cold section(s)
  - Cold section on control panel side; dimensions: ________
  - Cold section opposite side of the control panel; dimensions: ________
  - Cold section on top; dimensions: ________
  - Cold section on bottom; dimensions: ________
- Process heater.
  - Specify output temperature ________
  - (no thermal protection)

### 5 - System information

- Air flow: ________ CFM
- Voltage: ________ VAC
- No. of phases: ________
- Total power: ________ kW

### 6 - Heating stage(s) details

<table>

### 7 - Control panel components

- Transformer and control fuse (TR)
  - 60 Hz
  - 50 Hz
- Disconnect switch by others
  - (Supplied when required by code)
- No line or stage fuse
  - (Supplied when required by code)
- Magnetic contactor (CA)
- Full break
- Manual reset thermal cutout (MC)
  - (Supplied when required by code)
- For modulating electric heaters:
  - HEC Electronic controller (HEC)
  - Solid state relay (SSR)
- No pilot lights

### 8 - Thermostats and Sensors

- STC8-13 + ITO3 - Duct sensor and room set point controller
- STC8-13 + TRO5404 - Duct sensor and room modulating thermostat
- STC8-13 + HEC/ISP - Duct sensor and Internal set point controller

See overleaf to select reference number of required electric heater.

Please contact factory for special options
Specification: Open Coil Element Heater

Supply as described below and/or on the drawings. CSA approved electric heaters according to CSA standard C22.2 No. 155 and UL 1996, as manufactured by Neptronic.

Mechanical Construction
Neptronic electric heaters shall be manufactured using galvanized steel of appropriate gauge and will provide proper rigidity and resistance to corrosion. Electric heaters will be manufactured and approved for zero clearance for all combustible materials.

Heating Elements (Open Coil)
Heating elements will be manufactured from a grade C nickel chrome alloy (NiCr60).

Modulating Heaters
Neptronic modulating electric heaters will be supplied with an electronic sensor on each side of the heater to measure the temperature and the airflow, and a Neptronic HEC controller to adjust the output temperature in accordance with the measured parameters. The Neptronic HEC controller will stop the electric heater when there is no airflow.

Electrical Construction
Electric heaters will be supplied with a control panel with electric components adapted to the required voltage and current of the system. The control panel will be manufactured for indoor conditions and will provide safety features against accidental contact with internal components (Nema type 1) (IP10). The control panel will include a removable, hinged door to provide easy access. The connection terminals will be clearly identified, and a corresponding wiring diagram will be affixed to the control panel. The following standard components will be installed:

- Transformer with secondary fuse
- Magnetic contactor
- Automatic thermal cutout
- Manual thermal cutout (when required by code)
- Airflow switch
- Solid state relay (modulating control)

Additional components are optional, see list of options.

Safety
Electric heaters shall be supplied with the appropriate thermal cutout to protect the installations and the users against the risk of overheating. Inspections and tests will be performed before delivery according to safety and quality standards. Protective screens will be installed upon request, see list of options.

System Conditions
Electric heater operation shall not be affected by airflow direction and heaters may be installed in either vertical or horizontal ventilation ducts. To ensure that the electric components are correctly placed, please specify the direction of airflow. Modulating electric heater operation shall not be affected by the airflow direction. The Neptronic HEC controller will automatically recognize the direction of airflow and will operate accordingly. The mechanical dimensions and electrical requirements as well as the airflow will be as indicated on the heater schedule.

Approvals
Mechanical drawings and wiring diagrams shall be submitted to the Consulting Engineer for approval prior to production.
**SPECIFICATION**
**OPEN COIL ELEMENT HEATER**

**List of Options**

**Mechanical Construction**
*Compulsory option, choose one of the three options:*
- [ ] Slip-in electric heater
- [ ] Flanged electric heater
- [ ] Round collar electric heater

*If one of the following options is selected, remove the corresponding standard description:*
- [ ] Heating section (frame) in 304 stainless steel

**Open Coil Elements**
*If one of the following options is selected, remove the corresponding standard description:*
- [ ] Open coil elements in grade A (NiCr80) Nickel Chrome alloy, no traces of iron

**Electrical Construction**
*If one of the following options is selected, remove the corresponding standard description:*
- [ ] 304 stainless steel control panel
- [ ] Remote control panel
- [ ] Nema12 (IP52) Control panel (protection against dust)
- [ ] Nema4 (IP56) Control panel (protection against foul weather)
- [ ] Nema4X (IP56) Control panel (protection against foul weather and corrosion)
- [ ] No transformer-control voltage provided by others
- [ ] No contactor-control components provided by others
- [ ] Mercury Contactor
- [ ] Disconnect switch -no door interlock
- [ ] Disconnect switch with door interlock
- [ ] Load fuses HRC form 1
- [ ] Stage fuses HRC form 1
- [ ] Manual reset thermal cutout
- [ ] Neptronic HEC controller, assures precise modulation for heating demand and provides protection against overheating if there is a decrease in airflow.
- [ ] Power supply pilot light
- [ ] Stage pilot light
- [ ] Airflow pilot light
- [ ] Overheat pilot light

**Heater Protective Screens**
*Optional:*
- [ ] 1 protective screen to the left of control panel.
- [ ] 1 protective screen to the right of control panel.
- [ ] 1 protective screen to the left and one to the right of control panel.

**Special Construction**
Neptronic electric heaters may be constructed to adapt to particular conditions. Special construction will be available upon request according to the many options described in the catalogue and on the options summary sheet.
Specification: Tubular Element Heater

Supply as described below and/or on the drawings, CSA approved electric heaters according to CSA standard C22.2 No. 155 and UL 1996, as manufactured by NEP (Neptronic).

Mechanical Construction
Neptronic electric heaters shall be manufactured using galvanized steel of appropriate gauge and will provide proper rigidity and resistance to corrosion.
Electric heaters will be manufactured and approved for zero clearance for all combustible materials.

Heating Elements (Standard Tubular)
Heating elements will be tubular type, made of an Incoloy 840 (Nickel alloy) tube (standard tubular) or a steel tube (finned tubular) with a diameter of 7/16" (11mm) containing a heating coil in magnesium oxide powder.

Modulating Heaters
Neptronic modulating electric heaters will be supplied with an electronic sensor on each side of the heater to measure the temperature and the airflow, and a Neptronic HEC controller to adjust the output temperature in accordance with the measured parameters. The Neptronic HEC controller will stop the electric heater when there is no airflow.

Electrical Construction
Electric heaters will be supplied with a control panel with electric components adapted to the required voltage and current of the system.
The control panel will be manufactured for indoor conditions and will provide safety features against accidental contact with internal components (Nema type 1) (IP10).
The control panel will include a removable, hinged door to provide easy access.
The connection terminals will be clearly identified, and a corresponding wiring diagram will be affixed to the control panel.
The following standard components will be installed:

- Transformer with secondary fuse
- Magnetic contactor
- Automatic thermal cutout
- Manual thermal cutout (when required by code)
- Airflow switch
- Solid state relay (modulating control)

Additional components are optional, see list of options.

Safety
Electric heaters shall be supplied with the appropriate thermal cutout to protect the installations and the users against the risk of overheating.
Inspections and tests will be performed before delivery according to safety and quality standards.
Protective screens will be installed upon request, see list of options.

System Conditions
Electric heater operation shall not be affected by airflow direction and heaters may be installed in either vertical or horizontal ventilation ducts. To ensure that the electric components are correctly placed, please specify the direction of airflow.
Modulating electric heater operation shall not be affected by the airflow direction. The Neptronic HEC controller will automatically recognize the direction of airflow and will operate accordingly.
The mechanical dimensions and electrical requirements as well as the airflow will be as indicated on the heater schedule.

Approvals
Mechanical drawings and wiring diagrams shall be submitted to the Consulting Engineer for approval prior to production.
List of Options

Mechanical Construction

Compulsory option, choose one of the three options:

- Slip-in electric heater
- Flanged electric heater
- Round collar electric heater

If one of the following options is selected, remove the corresponding standard description:

- Heating section (frame) in 304 stainless steel

Heating Elements (Finned Tubular)

If one of the following options is selected, remove the corresponding standard description:

- Heating element shall be finned tubular type, made of a steel tube with a diameter of 7/16" (11mm) containing a heating coil in magnesium oxide powder.

Electrical Construction

If one of the following options is selected, remove the corresponding standard description:

- 304 stainless steel control panel
- Remote control panel
- Nema12 (IP52) Control panel (protection against dust)
- Nema4 (IP56) Control panel (protection against foul weather)
- Nema4X (IP56) Control panel (protection against foul weather and corrosion)
- No transformer-control voltage provided by others
- No contactor-control components provided by others
- Mercury Contactor
- Disconnect switch -no door interlock
- Disconnect switch with door interlock
- Load fuses HRC form 1
- Stage fuses HRC form 1
- Manual reset thermal cutout
- Neptronic HEC controller, assures precise modulation for heating demand and provides protection against overheating if there is a decrease in airflow.
- Power supply pilot light
- Stage pilot light
- Airflow pilot light
- Overheat pilot light

Heater Protective Screens

Optional:

- 1 protective screen to the left of control panel.
- 1 protective screen to the right of control panel.
- 1 protective screen to the left and one to the right of control panel.

Special Construction

Neptronic electric heaters may be constructed to adapt to particular conditions. Special construction will be available upon request according to the many options described in the catalogue and on the options summary sheet.
## Formulas

### Power or electric heater capacity

**Imperial**
\[
\text{kW} = \frac{\text{CFM} \times (T^\circ2 - T^\circ1) \times 1.08}{3413}
\]

**Metric**
\[
P = \frac{\text{Q} \times (T^\circ2 - T^\circ1) \times 1.21}{3600}
\]

- **kW**: Power in kW
- **CFM**: Air volume in Cubic Feet per Minute
- **T°2**: Temperature of air leaving heater in ∞F
- **T°1**: Temperature of air entering heater in ∞F
- **P**: Power in kW
- **Q**: Air volume in m³/hour
- **T∞2**: Temperature of air leaving heater in ∞C
- **T∞1**: Temperature of air entering heater in ∞C

### Temperature differential

**Imperial**
\[
\Delta T = \frac{\text{kW} \times 3413}{\text{CFM} \times 1.08}
\]

**Metric**
\[
\Delta T = \frac{\text{P} \times 3600}{\text{Q} \times 1.21}
\]

### KW per square foot

**Imperial**
\[
\frac{\text{kW}}{\text{pi}^2} = \frac{\text{kW}}{\text{S}}
\]

**Metric**
\[
\frac{\text{kW}}{\text{m}^2} = \frac{\text{P}}{\text{S}}
\]

- **kW**: Power in kW
- **S**: Surface area in square feet
- **P**: Power in kW
- **S**: Surface area in m²

### Duct area

**Imperial**
\[
\text{S} = \frac{\text{W} \times \text{H}}{144}
\]

**Metric**
\[
\text{S} = \text{W} \times \text{H}
\]

- **S**: Surface area in square feet
- **W**: Duct width in inches
- **H**: Duct Height in inches
- **S**: Surface area in m²
- **W**: Duct width in meter
- **H**: Duct height in meter

### Electric power

**Single phase**
\[
\text{P} = \text{V} \times \text{I}
\]

**3 phase**
\[
\text{P} = \text{V} \times \text{I} \times 1.732
\]

**Single phase**
\[
\text{I} = \frac{\text{P}}{\text{V}}
\]

**3 phase**
\[
\text{I} = \frac{\text{P}}{\text{V} \times 1.732}
\]

- **P**: Power in Watts
- **V**: Voltage in Volts
- **I**: Current in Amps
- **R**: Resistance in Ω (Ohm)

### Conversions

- **∞F to ∞C**
  \[
  \text{∞C} = \frac{(\text{∞F} - 32)}{1.8}
  \]

- **∞C to ∞F**
  \[
  \text{∞F} = (1.8 \times \text{∞C}) + 32
  \]

- **BTU to kW**
  \[
  1 \text{ kW} = 3413 \text{ BTU/hre}
  \]

- **kW to BTU**
  \[
  1 \text{ BTU/hre} = 0.29307 \times 10^{-3} \text{ kW}
  \]

- **mm to inches**
  \[
  1 \text{ in} = 25.4 \text{ mm}
  \]

- **Inches to mm**
  \[
  1 \text{ mm} = 0.03937 \text{ in}
  \]

- **CFM to FPM**
  \[
  1 \text{ FPM} = \frac{1 \text{ CFM}}{\text{S}}
  \]

- **FPM to CFM**
  \[
  1 \text{ CFM} = 1 \text{ FPM} \times \text{S}
  \]
